Let's take a short "breather." We'll get back to more of what this remarkable book will teach you in just a moment. But first, let's talk about why these secret sex techniques are so important.

Right now, there are approximately 16,222,181 people in the world with full blown AIDS. Another 56,122,303 are HIV Positive. On a worldwide basis, most of these people did not become HIV Positive because they were drug addicts sharing needles... or... because they received it in a blood transfusion... or... because they were having gay sex. Believe it or not, 81% of worldwide cases of HIV and AIDS are caused by the simple act of a straight man having sex with a straight woman. That's why, if you are in a monogamous relationship or if you are married, it is more important than ever not to go outside your relationship for sex.

Can you guess the biggest reason people cheat on their partners or commit adultery? It's very simple...

**It's Because They Are
