

Does someone in your home have a health problem?

Free Test Reveals If Your House Has Toxic Mold Problems!

If you own a home in Florida, this will be the most important message you will ever read.
Here is why:

The Florida climate is especially ripe for mold growth. **More than 70% of all houses tested in Palm Beach County were found to be infected with toxic mold.** This mold is very dangerous. And there is a good chance (it's probably only a matter of time) it will make you and your entire family sicker than you could ever imagine.

The mold in your home can be fatal! It causes many people to die... and often... even their doctors don't understand what it was that made these people sick. These are what experts call *"The Big Three"*:

Aspergillus: This is a contaminant/opportunistic pathogenic (in plain English, that means "disease causing") mold which can be responsible for asthma, nerve damage, liver disease, lung disease, heart disease and severe eye damage. This toxin is so deadly, it is a favorite biological weapon of third-world countries and they make it by the barrel.

The bad news is, many Florida homes are full of this mold and it is commonly found throughout the wall cavities and air conditioning systems of a home.

Stachybotrys: This is another deadly toxin caused by mold and also manufactured by third-world countries. It can be lethal to animals and children. It is often referred to as the "baby killer" and is believed to be responsible for killing infants in Cleveland, Ohio.

It is found on wet cellulose containing materials like drywall. It is normally found in houses after water damage and prefers to grow in dark places like wall cavities. You should be especially concerned if anyone in your home is experiencing difficulty breathing, dizziness, memory loss, hearing loss, urinary tract infections, gastrointestinal tract lesions, depression, headaches, tremors, skin rashes or flu like symptoms.

It also damages vital organs. Farmers have reported unknowingly feeding their cattle hay contaminated with this toxin and then witnessing the cows hemorrhaging from their eyes... *just before...* they dropped **dead like flies**.

Penicillium: Another disease causing mold responsible for a host of infections... especially... cancer.

Listen: There are dozens more toxic molds (all found in Florida homes) which mirror these horrible effects.

The Florida Department of Health notes that mold can cause health risks, if left untreated.

WARNING SIGNS!!!

A good indicator your home is sick and potentially dangerous to your health is if your home has suffered past water damages from roof, plumbing, or window leaks, etc., But that's not all: there are numerous problems that can occur in your home that lead to mold-creating condensation in places rarely discovered... like inside your walls and air-conditioning systems.

That means every time you turn on your air-conditioning unit, you are potentially spreading harmful mold spores throughout your home for you and your loved ones to breathe.

Now For The Good News!

There is a company called High Standard Services which has *100% guaranteed* solutions to ALL of the toxic mold problems in your home. They are so good, they are the official indoor environmental specialists for the Kravis Center.

High Standard Services will send a Certified Mold Specialist to your home and give it a complete mold inspection and even take an air sample...

100% Free!

If High Standard Services tests reveal you or your loved ones are breathing amplified levels of Toxic Mold, they will arrange for a limousine to pick you up and take you to a fine hotel while a certified team of mold remediators... *are making your home 100% safe for you to return to!*

So, if you even *suspect* your home might have a mold problem, you owe it to yourself and your family (especially if you are pregnant, elderly or have children living with you) to... *at least...* get the free inspection. All you have to do is call Patty for scheduling and details at...

(561) 686-MOLD (6653)

P.S. High Standard Services is the official Indoor Environmental Specialist for the Kravis Center.
